

Technical Report 14

INTERFEROMETRIC IMAGING WITH THE NNTT

Jacques M. Beckers

INTERFEROMETRIC IMAGING WITH THE NNTT

Jacques M. Beckers

The following are a set of notes produced for a presentation to the AURA NNTT Scientific Advisory Committee meeting on September 30, 1983. They include a number of unpublished concepts which, when used in reports or publications, should be referred to as MMT0 Technical Report Nr. 14. I have broken down these notes in the following set of sections and subsections.

TABLE OF CONTENTS

1. Scientific Importance of Interferometric Imaging
 - 1.1 High Angular Resolution Imaging
 - 1.1.1 Binaries
 - 1.1.2 Stars
 - 1.1.3 Galactic Nuclei
 - 1.1.4 Solar System Objects
 - 1.2 IR Photometry
 - 1.3 Present Limitations
 - 1.4 NNTT Amplitude Interferometry vs Other Techniques
2. Requirements Placed on NNTT Itself by Interferometry
 - 2.1 Phasing Precision
 - 2.2 Optical Configuration
 - 2.3 (u,v) Plane Configuration
 - 2.4 Side Lobes and Photometry
 - 2.5 Tracking
 - 2.6 Quality of Optics
3. Requirements Placed on Site Used for Interferometry
 - 3.1 Seeing
